

BT Engage Meeting Manager

The ideal solution for your unified meetings: video + audio + web

BT Engage Meeting Manager (BT Engage) is BT Conferencing's online application that gives you the flexibility and convenience to schedule, launch, monitor, and control unified meetings, be it from your PC, iPad or android device. Designed with the non-technical user in mind, BT Engage is an easy to use application that prevents resource conflicts and ensures that during each unified meeting the desired features are available.

Save time and money

BT Engage provides an online solution that requires no hardware or software to install and maintain. The system increases efficiency through automation of your most common meetings and centralises room and unified meeting reservations to prevent over-bookings and errors. BT Engage puts scheduling into the hands of the end-user, allowing you to focus on your meeting.

Increase reliability

BT Engage lays the foundation for disaster recovery and overflow protection. We store customer site data within our Onward database, so we can quickly load a call to a BT Conferencing Multipoint Conferencing Unit (MCU) in the case of an emergency or in the case of resource constraints. Our system allows for bridge pooling for overflow, so your conference can seamlessly move from a primary on-premise MCU to a secondary on-premise MCU. BT Conferencing offers consultation as a supplement to BT Engage to help you make the most of your assets.

Prove superior value

BT Engage enables you to manage your unified video + audio + web conferences via a single booking process. For unified meetings you will receive consolidated email confirmations and iCAL invites, plus integrated call start up and disconnect which is automated and transparent to the end user.

With BT Engage, you can extend the value of your video conferencing investment through well-informed decisions. Run site directory reports, conference activity reports, Daily Video Schedule reports, and MCU Utilisation reports to show how your equipment is being used to its full potential.

Use BT Engage to:

- Manage the unified meeting of your choice: a unified meeting can include video + audio + web
- Schedule and launch full-service and self-service automated unified meetings
- Track endpoint information
- Analyse system utilisation
- Evaluate trouble tickets
- Administer site and user data
- Track system health with Remote Equipment Monitoring (REM)
- Access online reporting
- Provide disaster and overflow protection
